

Supplemental material: prompts given to Google Gemini to generate first draft.

Prompt 1:

Please use the attached report to generate a short paper, limited to 1000 words for the journal Transport Findings. For this journal articles shall have 3 sections, and only 3 sections, titled as follows:

QUESTIONS Which includes research questions and hypotheses addressed in the article.

METHODS Which describes the methods and data used in the article.

FINDINGS Which describes the results of what you found.

There shall be no introduction, “road-map paragraph,” literature review, conclusions, speculations, or policy implications beyond what is included above. Focus on what you found, not why you found it.

Prompt 2:

I am also attaching annexes with tables, some of which can be included as supplemental material. We have two research questions: 1. How much CO2 is generated by commuting at Rutgers and 2. What happens when remote work policies are changed?

Prompt 3:

This was pretty good for a first try. Please add some background information about Rutgers and the dispersed campuses. Please also discuss how we adjusted the scenarios to account for staff only.

Prompt 4:

Very good. Please add a bit of discussion about which modes are used for commuting and by which segment of the population. See attached annex for tables.
