

Supplementary Information

S1. Corpus and sampling frame

Item	Description
Case	Bandros (Bandung Tour on Bus), Bandung, Indonesia
Data source	Public Google Reviews from five Bandros-related Google Maps listings
Listing identifiers	The five source listings (L1-L5), Google Maps URLs, extraction dates, and review counts are provided in S4.
Review posting period	January 2019-December 2025
Extraction dates	2, 5, 6, and 7 January 2026
Initial records	688 review entries
Excluded records	201 rating-only or empty entries; 30 off-topic entries
Final analytical corpus	457 review entries
Unit of analysis	Individual review
Coding logic	Codes were non-exclusive; one review could receive more than one code
Raw data sharing	Raw review texts are not redistributed to reduce platform and privacy risks

S2. Cleaning log

Step	Action	N	Decision rule
1	Initial corpus after extraction	688	All entries collected from five Bandros-related Google Maps listings within the stated time window
2	Remove rating-only or empty entries	-201	Entries without usable textual content were excluded
3	Remove off-topic entries	-30	Entries not referring to Bandros experience, access, service, route, or associated tourist mobility were excluded
4	Final analytical corpus	457	Reviews retained for coding and empirical illustration
5	Anonymisation	N/A	Reviewer handles are present in the source workbook. They are not reproduced in this supplementary information.

S3. Coding scheme

Code	Definition	Empirical signal	Inclusion/exclusion note	Paraphrased example
Mobile viewing	Movement exposes the city as a sequence of sights or atmospheres.	Users describe seeing Bandung, enjoying the route, city views, scenery, or urban atmosphere while riding or moving.	Include comments that treat movement as sightseeing or city experience. Exclude comments that mention only destination arrival without route experience.	The ride lets visitors see Bandung and enjoy the city atmosphere.
Symbolic form	The vehicle, route, or mode is recognised as a distinctive Bandung tourism experience.	Users refer to Bandros as iconic, unique, photogenic, memorable, or specifically associated with Bandung.	Include comments about vehicle identity, city branding, or distinctiveness. Exclude generic comments about ordinary bus transport.	The bus is remembered as a distinctive Bandung tourist vehicle.
Interpretation	Narration, guidance, stories, or explanation converts travel into place-based meaning.	Users value guides, narration, historical stories, local explanation, or interpretive content during the trip.	Include guide/narration/story comments. Exclude service-only comments without interpretive meaning.	The guide explains places and makes the route meaningful.
Governance	Operational conditions make the experience legible, safe, reliable, and usable.	Users mention waiting, access, schedule, information, capacity, queueing, safety, ticketing, or service clarity.	Include positive or negative operational comments. Governance can strengthen or weaken attraction value.	Long waiting, unclear access, or uncertain information weakens the experience.

S4. Source listing audit

The five Google Maps sources are identified below. URLs and extraction dates follow the collection log. Counts are calculated from the RAW and FINAL worksheets.

ID	Source listing and Google Maps URL	Extracted	Retained	Excluded	Extraction dates
L1	Bandros Braga https://maps.app.goo.gl/quyNayWdV1tsVdex9	6	4	2	7 Jan 2026
L2	Bandros (Bandung Tour On Bus) https://maps.app.goo.gl/oh4zuDdW19hN5nRq9	544	380	164	2, 5, 6 Jan 2026
L3	Alun Alun Bandros https://maps.app.goo.gl/Tu3CCyoxFMuTzEks8	3	1	2	7 Jan 2026
L4	Bandros Station https://maps.app.goo.gl/rNvbpm53TwcZ4jyr5	96	46	50	6 Jan 2026
L5	Bandung tour on bus (Bandros) https://maps.app.goo.gl/UbmiPi4sJMpvg2H36	39	26	13	6, 7 Jan 2026
	Total	688	457	231	

Counts refer to the archived extraction, rather than current Google Maps totals. The two Bandros Braga entries in the workbook summary are combined here, consistent with the collection log: six extracted reviews and four retained reviews.

S5. Review-level coding matrix

Table S5c below provides one row for each of the 457 retained reviews. It includes the original internal review ID, source listing ID (L1-L5, as in S4), star rating, rating-based valence, primary and additional codes, and four binary condition indicators. Reviewer handles, review texts, and review-level URLs are omitted.

The indicators are derived from the existing coding log using the operational mapping below, without recoding review text. Both primary and additional codes are included. An indicator equals 1 when at least one mapped code is present and 0 otherwise. Each review is counted once per condition; conditions are non-exclusive.

Table S5a. Mapping source codes to condition indicators

Condition	Source codes and meanings
Mobile viewing	D1: Servicescape (city sightseeing, route and atmosphere).
Symbolic form	D5: Branding; P4: Identity.
Interpretation	P3: Authenticity (educational/historical meaning); P3a: Nostalgia; T2a: Audio quality.
Governance	S3a: Schedule and capacity; S3b: Queue fairness; S3c: Reliability; D3: Accessibility; S5: Information/eWOM; S5a: On-site communication; S4: Safety.

Exact code matching is used. Subcodes are included only when explicitly listed. P3a adds no unique review beyond P3 and T2a in this corpus. Valence follows the review rating: 4-5 stars = favourable; 3 = ambivalent; 1-2 = negative. It does not represent separate sentiment coding for each condition.

Table S5b. Reproduced condition counts

Condition	N	% of 457	Favourable	Ambivalent	Negative
Mobile viewing	184	40.3	171	10	3
Symbolic form	36	7.9	34	1	1
Interpretation	116	25.4	112	4	0
Governance	157	34.4	113	20	24

The review-level matrix below reproduces the manuscript counts and rating distributions. Governance occurs in 44 of 72 ambivalent or negative reviews (61.1%) and 113 of 385 favourable reviews (29.4%). The included source codes and binary indicators permit recalculation of the condition totals. Without original review text, independent reassessment of qualitative code assignment remains limited.

Table S5c. Review-level coding matrix (n = 457)

Note. Binary indicators equal 1 when at least one mapped source code is present and 0 otherwise. Conditions are non-exclusive. Valence is based on the whole-review star rating (4-5 favourable; 3 ambivalent; 1-2 negative).
